

Secure Printing Controls Documents & Saves Money

emsProductFocus09-StidPrinter

Unlock Secure Printing – Cut Costs & Lock Down Sensitive Docs   Uncontrolled printing is quietly draining your budget and exposing confidential info – it's time to take back control.

The Problems:

- Sky-high costs: Paper, ink, and toner waste adds up fast with no limits on who prints what.
- Security leaks: Anyone near a printer can grab or print sensitive documents – big risk for confidential data.
- Zero accountability: No tracking means you can't spot overuse, misuse, or breaches – hard to fix what you can't see.

EMS's Smart Secure Printing Solution We combine **STid ARC1/BT Mobile Access Readers** with biometric phone auth and centralized tracking – only authorized people print, costs drop, and everything's logged.

How It Works (Simple & Secure):

- **STid ARC1/BT Readers** on printers: Employees authenticate via their mobile device before printing.
- **Biometric check:** Use your phone's fingerprint or face ID (powered by Microsoft's SIEM security framework) – no shared passwords or cards.
- **Unique credentials:** Each person gets their own

secure mobile credential – grant access to specific printers or departments only.

- **Instant revocation:** Employee leaves? Revoke their credential in seconds from the central system – no loose ends.
- **Full tracking:** Every print job logs who, what, when, and how much – detailed reports show patterns and flag risks.

Why You'll Love It:

- **Big cost savings:** Limit printing to authorized users – slash paper/ink waste and cut budget overruns.
- **Stronger security:** Biometric + mobile credentials block unauthorized access – protect sensitive info and stay compliant.
- **Real accountability:** Know exactly who's printing what – spot breaches, monitor habits, and optimize usage fast.
- **Easier management:** One central dashboard for credentials and reports – less admin hassle, more control.

Key Features That Deliver:

- STid ARC1/BT Mobile Readers: Secure, phone-based access right at the printer.
- Biometric Identification: Fingerprint/face via Microsoft SIEM – top-tier protection.
- Secure Credential System: Unique, revocable mobile creds for each user.
- Detailed Usage Tracking: Full logs of every print event – insights and alerts built-in.

Stop the waste, seal the leaks, and make printing secure and accountable.

Ready to transform your printing from a risk to a controlled asset?
