

STid Replaces Expensive CAPEX Biometrics with Control from Users Mobile Devices

emsProductFocus13-STidSAVEBiometric

Unlock Top Security Without the High Price Tag

Want strong biometric access control for doors, time & attendance, vehicle gates, or secure zones – but hate the huge costs?

The Problems with Traditional Biometrics:

- Very expensive to buy and install.
- Short warranties mean replacements come fast.
- Big upfront investment that hurts the budget.

EMS's Smart, Affordable Solution: Switch to STid Mobile Readers running in BUTTON mode with Mobile Credentials. Get real biometric security using your users' own smartphones – at a fraction of the cost!

Why This Works So Well:

- Replace your old card or biometric readers directly.
- No new cables or wiring – use the exact same power and connections!
- Supports both card taps **and** mobile phone access.
- Lifetime warranty – built tough, no replacement worries.
- Users unlock with their phone (no extra hardware needed).

How It Works (Simple & Powerful):

- Readers connect via Bluetooth™ or NFC™ – unlock from up to 12 meters away.
- Or just tap a standard MiFare card for quick entry.
- Easy swap: Mount in the same spot as your current reader.
- Choose from 6 flexible modes – including **mobile phone biometrics** (fingerprint or face) for maximum security.
- **Remote/Button Mode:** Phone must be unlocked with its own fingerprint or face ID before the reader activates – extra layer of protection.
- Your phone acts as the "key" – super convenient!

Extra Wins You Get for Free:

- Every time users upgrade their phone, your security gets better automatically (newer biometrics, faster processing) – no extra cost to you!
- Users take care of their own device – they keep it secure and charged.
- Your facility enjoys cutting-edge tech and stronger protection without buying expensive dedicated biometric hardware.

Ditch the overpriced, outdated biometrics and get modern, phone-based security that's reliable, upgradeable, and budget-friendly.

Ready to level up your access control without breaking the bank?

Contact EMS today to learn more about STid Mobile Readers in BUTTON mode – and bring affordable, high-level biometric security to your site!

Secure today. Save tomorrow. 

Why would you host access cards on your smartphone?

98%

of employees consider access control to be obstructive at times.

STid Mobile ID[®] is offering a great user experience, which significantly improves the support of security policies and security systems. The security in private and public organisations benefits from Mobile ID deployments.

70%

of organisations rely on third party infrastructures for their security systems.

STid Mobile ID[®] allows you to be in full control. The platform can run exclusively on your own private network if you prefer.

90%

of companies believe their data is at risk.

STid solutions are secure by design. STid Mobile ID[®] is based on end-to-end security concepts. Both the storage and communication of data take advantage of modern encryption standards.

+50%

of the operational costs of card management are related to printing, customisation and distribution of the cards.

STid Mobile ID[®] significantly reduces these costs by enabling you to create, deliver and revoke virtual cards with just one mouse click.
